DISSEMINATION OF RESEARCH IN POPULAR MEDIA

There have been numerous articles on my research in international newspapers including front page articles in The Times and New York Times, and many articles in popular journals including New Scientist, Scientific American, National Geographic Magazine and Time.

Following the publication of our 2011 paper in Science on the Blombos Cave ochre processing toolkits, 794 articles appeared in the popular press in 66 countries with a potential viewership of nearly 600 million people (Newsclip Media Monitoring). In 2016 a silcrete flake with ochre markings from the 73 ka levels at BBC was analysed in Cape Town and Bordeaux. The results, including those from experimental work, showed this was a # drawing made with an ochre crayon. It was published in October 2018 in Nature (IF: 43.07; citations: 33), attracted a lot of online attention (accessed 22 000 times online), with an altmetric score of 2361. This places the article "in the 99th percentile (ranked 42nd) of the 270,486 tracked articles of a similar age in all journals", and "in the 99th percentile (ranked 8th) of the 961 tracked articles of a similar age in Nature".

My work has been widely publicised on CNN, BBC, CBC, National Geographic, Japanese, Scandinavian and other European television channels. In January, 2015, my work at Blombos Cave & Klipdrift featured on the cover, and as the lead story, in National Geographic Magazine.
